

# Lesson 19: Comparison Shopping—Unit Price and Related Measurement Conversions

## Classwork

Analyze tables, graphs, and equations in order to compare rates.

### Examples: Creating Tables from Equations

- The ratio of cups of blue paint to cups of red paint is 1:2, which means for every cup of blue paint, there are two cups of red paint. In this case, the equation would be  $\text{red} = 2 \times \text{blue}$ , or  $r = 2b$ , where  $b$  represents the amount of blue paint and  $r$  represents the amount of red paint. Make a table of values.

- Ms. Siple is a librarian who really enjoys reading. She can read  $\frac{3}{4}$  of a book in one day. This relationship can be represented by the equation  $\text{days} = \frac{3}{4}\text{books}$ , which can be written as  $d = \frac{3}{4}b$ , where  $b$  represents the number of books and  $d$  represents the number of days.

2. Braylen and Tyce both work at a department store and are paid by the hour. The manager told the boys they both earn the same amount of money per hour, but Braylen and Tyce did not agree. They each kept track of how much money they earned in order to determine if the manager was correct. Their data is shown below.

Braylen:  $m = 10.50h$  where  $h$  represents the number of hours worked and  $m$  represents the amount of money Braylen was paid

Tyce:

Number of Hours	0	3	6
Money in Dollars	0	34.50	69

- a. How much did each person earn in one hour?

- b. Was the manager correct? Why or why not?

3. Claire and Kate are entering a cup stacking contest. Both girls have the same strategy: stack the cups at a constant rate so that they do not slow down at the end of the race. While practicing, they keep track of their progress, which is shown below.

Claire:

Kate:  $c = 4t$ , where  $t$  represents the amount of time in seconds and  $c$  represents the number of stacked cups

- a. At what rate does each girl stack her cups during the practice sessions?
- b. Kate notices that she is not stacking her cups fast enough. What would Kate's equation look like if she wanted to stack cups faster than Claire?
